### **TerraCycle Turns Used Oak Wine Barrels into Eco-Revolutionary Garden Products**

TerraCycle, Inc. launches eco-friendly, attractive Rotary Composters and Rain Barrels to help homeowners become eco-friendly without sacrificing style or money

**October 15<sup>th</sup>, 2007 (Trenton, NJ):** TerraCycle™, a company known for their all-natural worm poop plant foods, is launching two brand new eco-friendly products, a Rotary Composter and a Rain Barrel. These products, like all TerraCycle products, are made entirely from waste! The Composter and the Rain Barrel are made from African Oak barrels that were used to ferment red wine at California vineyards.

Vineyards are only able to use these expensive oak barrels, which are made from African Oak and handcrafted in France, once before they are discarded, wasting the quality wood and workmanship. TerraCycle has come up with two innovative solutions to this huge loss of resources. Turning these used wine barrels into Composters and Rain Barrels is ultimately eco-friendly in two facets. TerraCycle is not only saving these barrels from a landfill, but also enabling homeowners to save the environment and money at the same time!

Gardeners can keep their home beautiful and organic without all the hard work! Unlike traditional composters that must be turned by hand, the **TerraCycle Rotary Composter™** is situated on 4 rollers, making it easy to rotate, speeding up the composting process, without all the effort.

Perfect for gardeners who have tired of unsightly compost piles or black plastic boxes, the Composter is made from 100% African Oak wine barrel, which easily blends into its surroundings and itself has all the class of the vineyards it once called home. Keeping your compost at the proper temperature makes better compost, faster. The **TerraCycle Rotary Composter** comes with a thermometer already attached to make this important task extremely easy.

Water conservation is to the environment what monetary conservation is to most families, extremely important! Now homeowners can accomplish both with the **TerraCycle Rain Barrel™**. Already eco-friendly because it is made entirely from waste, this Barrel attaches to any downspout allowing homeowners to save both water and dollars off of their monthly water bill. Plus the oak exterior makes the Barrel much more discreet than plastic rain barrels.
